

Fire Alarm Systems: Testing, Maintenance and Inspection

1.5 Hours 0.15 CEUs ICC Course #24919

The *Fire Alarm Systems: Testing, Maintenance and Inspection* virtual training course provides participants a detailed look into the testing and inspection requirements of Fire Alarm Systems. This is segment 2 of a 3-part series. This segment must be taken before moving onto segment 3.

Content includes educating participants with the following topics:

- Testing
 - Why Test Fire Alarms
 - Code, Liability, and Responsibility
 - Testing Frequencies
 - Testing Procedures/Documentation
- Inspection (Using an Inspection Checklist)
 - Annual Inspection
 - New Accounts
 - Completion of Testing/Inspection Form
- Non-Compliant Examples

Learning Objectives:

- Understanding where responsibility falls when maintaining fire alarm system records.
- The chapter of NFPA 72 that refers to inspections, testing, and maintenance.
- The NFPA 72 Edition that includes a required written test plan.
- To understand the percentage of devices that are tested annually.
- The steps taken when performing an annual inspection.
